Math 213 - Double Integrals

Reminders

- Homework B6 on 14.7 (closed set method) is due tonight
- Homework B7 on 14.8 (Lagrange multipliers) is due Monday!
- There is a drop-in review session for Exam II on Monday, October 14, 6:00-8:00 PM in KAS 213
- Exam II takes place on Wednesday, October 16, 5:00-7:00 PM

Unit II: Functions of Several Variables

13.3-4 Lecture 11: Velocity and Acceleration

- 14.1 Lecture 12: Functions of Several Variables
- 14.3 Lecture 13: Partial Derivatives
- 14.4 Lecture 14: Linear Approximation
- 14.5 Lecture 15: Chain Rule, Implicit Differentiation
- 14.6 Lecture 16: Directional Derivatives and the Gradient
- 14.7 Lecture 17: Maximum and Minimum Values, I
- 14.7 Lecture 18: Maximum and Minimum Values, II
- 14.8 Lecture 19: Lagrange Multipliers
- 15.1 Double Integrals
- 15.2 Double Integrals over General Regions Exam II Review

Learning Goals

- Understand why the volume under a surface can be computed as a double integral, a limit of double Riemann sums
- Understand how to compute double integrals over rectangles as *iterated integrals*
- Understand how to find the *average value* of a function of two variables over a rectangular domain

The area under the graph of y = f(x) between x = a and x = b is approximated by *Riemann sums*

$$\sum_{i=1}^n f(x_i^*) \, \Delta x$$

where

$$\Delta x = \frac{b-a}{n}$$
$$x_i = a + i\Delta x$$
$$x_i^* \in [x_{i-1}, x_i]$$

A Riemann sum with n = 8 for $\int_a^b f(x) dx$

University of Kentucky

University of Kentucky

The exact area under the graph of f(x) between x = a and x = b is

$$\int_{a}^{b} f(x) \, dx$$

The Fundamental Theorem of Calculus states that, if f is continuous on [a, b], then

$$\int_{a}^{b} f(x) \, dx = F(b) - F(a)$$

for any antiderivative F of f.

We extended these ideas to compute the *net area* under the graph of a signed function and the *av*-erage value of a function f over an interval [a, b]

Math 213 - Double Integrals

Calculus II: Volumes under Surfaces

Problem Find the volume between the rectangle

$$R = [a, b] \times [c, d]$$

in the xy plane and the surface

$$S = \{(x, y, z) : (x, y) \in R, \ z = f(x, y)\}$$

if f is a continuous function.

- **1** Divide the rectangle *R* into an $n \times n$ 'grid' of subrectangles $R_{i,j}$
- 2 For each subrectangle $R_{i,j}$, make a box of height $f(x_i^*, y_j^*)$
- **3** Add up the volumes of the n^2 boxes

Volumes By Integration

If $R = [a, b] \times [c, d]$ and

$$S = \{(x, y, z) : z = f(x, y), (x, y) \in R\}$$

then the volume between *R* and *S* is

$$V = \lim_{n \to \infty} \sum_{i,j=1}^{n} f(x_i^*, y_j^*) \Delta A = \iint_{\mathcal{R}} f(x, y) \, dA$$

Find
$$\iint_R f(x, y) dA$$
 if
 $R = [-1, 1] \times [0, 2]$

and

$$f(x,y) = \sqrt{1-x^2}$$

< • • • • •

Can you do this without calculus?

Peter A. Perr

Iterated Integrals

When you studied one-variable calculus, you first found out how to compute antiderivatives and then you learned how to compute definite integrals using them

Now that you're studying two variable calculus, you'll first learn about *iterated integrals* and then learn how to compute integrals over rectangles with them.

Suppose *R* is a rectangle $[a, b] \times [c, d]$ and *f* is a continuous function on *R*. Then

$$A(x) = \int_{c}^{d} f(x, y) \, dy$$

is a function of *x*. For example if $f(x, y) = x^2 y$ and $R = [1, 2] \times [3, 4]$, then

$$\int_{3}^{4} (x^{2}y) \, dy = \left. \frac{x^{2}y^{2}}{2} \right|_{3}^{4} = \frac{7}{2}x^{2}$$

We then compute $\int_{a}^{b} A(x) dx$. For example

$$\int_{1}^{2} \frac{7}{2} x^{2} dx = \left. \frac{7}{6} x^{3} \right|_{x=1}^{x=2} = \frac{49}{6}$$

イロト イポト イヨト イヨト

Iterated Integrals

If f(x, y) is a continuous function on a rectangle $R = [a, b] \times [c, d]$, the **iterated integral** of *f* is

$$\int_{a}^{b} \int_{c}^{d} f(x,y) \, dy \, dx = \int_{a}^{b} \left(\int_{c}^{d} f(x,y) \, dy \right) \, dx$$

2 Find $\int_{1}^{3} \int_{1}^{5} \frac{\ln y}{xy} dy dx$
3 (Ringer) $\int_{0}^{1} \int_{1}^{2} (x + e^{-y}) dx dy$

From Areas to Volumes Iterated Integrals General Regions Average Values 00000 0000 00 00 0000 00

Fubini's Theorem

Theorem If *f* is continuous on the rectangle

$$R = \{(x,y) : a \le x \le b, \ c \le y \le d\}$$

then

$$\iint_R f(x,y) \, dA = \int_a^b \int_c^d f(x,y) \, dy \, dx = \int_c^d \int_a^b f(x,y) \, dx \, dy.$$

Evaluate these double integrals.

1
$$\iint_{R} x \sec^{2} y \, dA, R = [0, 2] \times [0, \pi/4]$$

2 $\iint_{R} \frac{xy^{2}}{x^{2}+1} \, dA, R = [0, 1] \times [-3, 3]$
3 $\iint_{R} \frac{1}{1+x+y} \, dA, R = [1, 3] \times [1, 2]$
